# PTS4

## Self-adjusting wire stripper and cutter

Place cable between cutter blades and close handles fully

Clamp prepared cable between front blades, against the cablestop, for the length to be stripped, using as reference millimeter scales laterally positioned.

Press on handles; cables are locked by external jaws while the insulation is lightly cut without damaging the conductor.  
For external sheaths of three-core cables, change blade pressure using the adjustment.

The complete closing of the handles operates a sliding action of the blades that removes the insulation.
